This new design brush was developed with both men and women in mind.

minimum time and allows for fast even distribution in minimum time for a flawless airbrush finish.

“CATCH AND RELEASE” TECHNOLOGY

The patented tri-sphere fibertech process that has Hollywood artists swooning features a unique, 3-D crimping system that enables each filament to achieve 360-degree powder pickup, rather than the two-sided pickup of conventional brushes. This greater pickup means greater product release—85 percent as opposed to the standard 50 percent of conventional brushes. As a result of this high level, “catch and release” performance, makeup goes on more quickly—without repeated dipping—and more smoothly thanks to the concentration of makeup on the brush. “Some makeup artists have told us this brush sweeps over the face and provides a flawless airbrush finish.” notes Gulamani

Additionally, the synthetic, soft-touch brush filaments offer the smooth feeling and performance of high-quality animal hair, without the environmental impact. Unlike animal hair, these filaments repel dirt and bacteria and shed minimally if at all. They are also quick and easy to clean thanks to the fact that the product release is so complete, with little-to-no makeup remaining on the brush after application. The kabuki powder brush is strong and long-lasting and will not aggravate anyone with animal hair allergies. This brush is a must for everyone.
