

Konstant Ranked 7th Top Hybrid App Development Company

Mobile App Daily's latest listing on hybrid app developers shows Konstant Infosolutions at 7th place; here's the story behind the scenes!

UNITED STATES, February 1, 2021

/EINPresswire.com/ -- Hybrid apps use HTML, HTML5, CSS, JavaScript as their building blocks; wrap themselves up in Cordova/Phonegap, using a mobile WebView object; to make for a fast and easy to maintain. This object displays web content from a desktop website, adapted to a WebView display, using web technologies. Hybrid apps make use of native code to access the specific features to create a seamless user experience. Hybrid Apps rely on platforms that offer JavaScript API's if those functionalities are called within a

WebView. These are installed on devices and are built for a specific platform like iOS or Android. But acquiring some elements from native applications.

Konstant considered a host of factors to choose hybrid app development like the platform or environment used to create an app depends upon the target audience, the purpose of the business, the specific requirements of the clients, the demand in the market, the availability of skilled professionals to create an application, the primaries like web/mobile environments, the technology stack to be used, the aligning legal permissions, the popularity of that business, the accessibility to the app/play stores, the functionalities/features to include, the type of testing (manual/automated), and the availability of development resources. Additionally, we also chose the size of the company, developers' skills, and the needed solution; considering these we were able to determine the set of tools, technologies required to create the best hybrid apps.

We used one-to-many of these programming languages and frameworks for Hybrid App

Development - Adobe PhoneGap, Xamarin, React Native, Ionic and Sencha etc. We have created hybrid shopping apps, note-taking apps, on-demand food delivery apps, social networking, banking/finance, real estate, education/e-learning apps, e-commerce/retail/B2B solutions on a hybrid platform. A detailed [report on top hybrid app Development Companies is available here](#).

We combined user experience with the agile development cycle and controlled costs. We considered the waiting time for validation while deploying the application over to Apple App Store

(depending upon first submission or an update). We reused the code, found resources to develop the application, which helped us reduce time and costs.

Our core expertise includes:

- Programming Languages for Android Development – Java, Kotlin
- Programming Languages for iOS Development – Swift, Cordova, Objective C
- Web Development – Core PHP, Node.js, Angular.js, Python, React Native, React.js, ASP.NET, PHP Frameworks
- Hybrid Development - Xamarin, Ionic, Flutter, Native, Native Script, Wordpress, HTML5, CSS3, Phonegap (HTML, CSS, JavaScript), Cocos 2DX, Cordova
- E-Commerce Development - Joomla, WordPress, JavaScript, Drupal
- Platforms - Microsoft Visual Studio, Eclipse, Idea, RubyMine, Xamarin Studio
