

United States Clinical Decision Support System (CDSS) Market to Dominate the Global CDSS Market During 2020-2027

LONDON, UNITED KINGDOM, February 3, 2021 /EINPresswire.com/ --

Increasing incidence of medication errors along with growing investments in order to improve the quality of care has fostered the need for clinical decision support systems. Also, several government initiatives to promote the adoption of automated healthcare solutions are likely to boost the market demand for clinical decision support system (CDSS) over the forecast period. The global clinical decision support system (CDSS) market is likely to grow from USD 929.58 million to USD 3,210.24 million by 2027, at a CAGR of 18.0% over the forecast period (2020-2027) according to QuantAlign Research.

Healthcare system has been fragmented across the globe, i.e. there are several decision makers for the treatment of an individual with particular illness. The lack of coordination among healthcare professionals and patients has negatively impacted the quality of healthcare and its cost, which led to the fragmentation of healthcare information (such as diagnosis, medical history, patient demographics, billing and administrative data). This in turn derived the need for HIT, including CDSS, and computerized physician order entry (CPOE) systems.

CDSS and their software are gaining popularity in healthcare facilities, due to innovative and advanced applications, such as, double-checking medication administration properties, drug reminders, and drug allergy alerts. These innovative and advanced applications of CDSS reduce chances of adverse drug events, and medication errors. Moreover, they improve healthcare quality, and reduce healthcare cost.
