

Low Vision of New Jersey Assists With Difficult Vision Problems and Side Vision Loss

USA, February 17, 2021

[/EINPresswire.com/](https://www.einpresswire.com/) -- Eye diseases, like macular degeneration, diabetic retinopathy, and glaucoma and neurological conditions, like stroke or traumatic brain injury, can cause blurry vision or side vision loss that disrupting the lives and independence of those who have those conditions. Specially-trained optometric physicians such as Dr. Errol Rummel of Low Vision of New Jersey use their expertise to care for people with difficult vision problems that are beyond the help of medicine, surgery, or regular eyeglasses.

Dr. Rummel is a resource for those who have heard from others that “nothing more can be done.” With only limited Fellows of the International Academy of Low Vision Specialists (IALVS), Low Vision of New Jersey offers a critical, hard-to-find service that helps people improve their reduced eyesight.

The practice is limited to Low Vision Care and the Care of Visual Field Loss. Low Vision Care refers to the design of advanced optical technology to enhance vision not helped by regular glasses or standard eye care and is indicated for people with eye diseases such as macular degeneration, diabetic retinopathy, glaucoma, or optic nerve disease. The care of Visual Field Loss involves the design of advanced optical technology to improve side vision awareness for people with specific neurological conditions like stroke or traumatic brain injury and people with constricted fields (tunnel vision) caused by eye diseases like retinitis pigmentosa. Using his extensive experience, Dr. Rummel is finding solutions to those problems and even developed technology to address side awareness loss. The technology is called [Side Vision Awareness Glasses](#) and is in use by eye doctors he has trained around the United States and Canada.

The goal of low vision care is to help people reclaim the ability to do tasks that are important to them, be it driving a car, reading the paper, or recognizing faces across the room.
