

Extreme UV Lithography Market Is Driven By Increasing Demand For Smartphones & Their Need For Powerful Microprocessors

*The Business Research Company's
Extreme Ultraviolet Lithography Global
Market Report 2021: COVID-19 Growth
And Change*

LONDON, GREATER LONDON, UK,
February 25, 2021 /EINPresswire.com/
-- New year, new updates! Our reports
have been revised for market size,
forecasts, and strategies to take on
2021 after the COVID-19 impact:

Increasing demand for smartphones is expected to boost the demand for the extreme ultraviolet lithography market. Extreme ultraviolet lithography (EUVL) is an advanced technology used for manufacturing more powerful microprocessors than traditional ones for smartphones and personal computers. EUV lithography helps build compact electronics chips with less complexity, reduced cost, and fewer power requirements. According to the joint study conducted by ASSOCHAM-PwC in May 2019, the number of smartphone users in India is expected to double to reach 859 million by 2022. Thus, increasing demand for more advanced smartphones creates a higher demand for EUV lithography to enable chipmakers to produce faster, smaller, and more powerful chips.

The global extreme ultraviolet lithography market is expected to grow from \$2.33 billion in 2020 to \$2.87 billion in 2021 at a compound annual growth rate (CAGR) of 23.33%. The lithography market share growth is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of

commercial activities that resulted in operational challenges. The [extreme ultraviolet lithography \(EUVL\) equipment market](#) is expected to reach \$5.7 billion in 2025 at a CAGR of 18.72%.

The EUV market covered in this report is segmented by equipment into light source, mirrors, mask, others; by light source into laser-produced plasma, gas discharge, vacuum sparks; by end-user into integrated device manufacturers (IDM), foundry, others.

The major players covered in the extreme ultraviolet lithography systems market are ASML, Nikon, Canon, Intel Corporation, Samsung Electronics Co. Ltd., Taiwan Semiconductor Manufacturing Company Limited (TSMC), SUSS Microtec AG, Carl Zeiss AG, Toshiba, Ultratech Inc., Vistec Semiconductor Systems, SK Hynix, TSMC, GlobalFoundries, NTT Advanced Technology.

[Extreme Ultraviolet Lithography Global Market Report 2021](#): COVID-19 Growth And Change is one of a series of new reports from The Business Research Company that provides extreme ultraviolet lithography market overview, forecast extreme ultraviolet lithography market size and growth for the whole market, extreme ultraviolet lithography market segments, and geographies, extreme ultraviolet lithography market trends, extreme ultraviolet lithography market drivers, restraints, leading competitors' revenues, profiles, and market shares.
