

BentallGreenOak and Bee-Clean Improve Safety, Efficiency, and Accountability with Solutions by BuiltSpace Technologies.

BentallGreenOak and Bee-Clean Building Maintenance are Using BuiltSpace Technologies to Make Healthier, Safer, Smarter, and More Efficient Buildings.

VANCOUVER, BRITISH COLUMBIA, CANADA, March 15, 2021
/EINPresswire.com/ -- [BentallGreenOak](#) (Canada) Limited Partnership ("BentallGreenOak" or "BGO"), a leading Canadian real estate services firm, is partnering with [Bee-Clean Building Maintenance](#) to implement cloud-based technology from [BuiltSpace Technologies](#) that tracks maintenance activities and communicates safety measures to tenants as they occur.

BGO has spearheaded the implementation, with full support from Bee-Clean, their building maintenance contractor.

Property managers face heightened pressure to increase building efficiency, enhance safety, and communicate with employees, tenants, and vendors entering the building. BuiltSpace, a scalable

cloud-based digital process management platform, ensures procedural compliance and data sharing at common touchpoints with a QR code-activated mobile application. According to BentallGreenOak Property Manager Kevin Soltani, "BuiltSpace sets a new standard for accountability and tenant communication."

“

We are proud to showcase the consistency and quality of Bee-Clean's cleaning work to BGO and its tenants in a transparent manner.”

Bee-Clean Building
Maintenance*

As workers return to the office, BGO is going beyond social distancing markers and enhanced air filtration in their effort to protect tenants' health by rolling out the BuiltSpace solution to property managers. "We want our

tenants to come to work feeling safe," said Sam Flis, Director, Property Technology.

BGO has spearheaded the implementation, with full support from Bee-Clean, their building maintenance contractor. Using a phased approach, BGO will place QR codes in high traffic, high-touch locations of common areas. Janitorial staff can use a mobile device to confirm all cleaning and safety procedures are completed at the high-quality standard for which Bee-Clean is known. Phase two will include the implementation of tenant suites. Tenants and guests can activate BuiltSpace QR codes in real-time to see how and when the janitorial staff last cleaned spaces. "We are proud to showcase the consistency and quality of Bee-Clean's cleaning work to BGO and its tenants in a transparent manner," claimed Neil Thomson, Regional VP at Bee-Clean Building Maintenance.

The BuiltSpace data portal helps large organizations like BGO justify increased digital process management usage throughout the building or to other facilities in their global portfolio. "The scalability allows us to start with certain classifications of spaces and then move it upward and expand it smoothly within a space," explained Dion Chrapko, Vice President of Property Management at BentallGreenOak. "Once tenants are used to scanning QR codes in one area, we anticipate it will become intuitive to use the functionality in another space."

The BuiltSpace platform can scale across the full spectrum of building services with the same benefits and control as the janitorial services. "The foundation of a smart building is data," says Rick Rolston, CEO of BuiltSpace. "We've made it easy and affordable for buildings of any size to collect and organize data from individual facility assets and the staff who service these spaces. We believe that this information empowers building owners to optimize their operations while improving the health of their indoor spaces."

BGO will place QR codes in high traffic, high-touch locations of common areas. Janitorial staff can use a mobile device to confirm all cleaning and safety procedures are completed.

ABOUT BUILTSPEACE TECHNOLOGIES

BuiltSpace lays the groundwork for smart buildings with a QR Code-activated application that collects data at the point of service. The BuiltSpace platform enables proactive process management across the complex ecosystem of manufacturers, service suppliers, and facility operators. QR Codes placed on individual assets or at specific locations offer a user-friendly way to share real-time process instructions and ensure that tasks are completed satisfactorily. The platform aims to improve energy efficiency and reduce administrative and service costs to building owners, managers, tenants, and service personnel.
