The ethical food market consists of sales of ethical food items and related services. Ethical or sustainable food refers to food produced using processes and systems that are non-polluting, economically efficient, conserve non-renewable natural resources and energy, safe for workers, consumers, and communities, and do not compromise on the future generation needs. It uses a method of food production wherein the people (small farmers, producer co-operatives, large estates), the environment (environment sustainability), and animals (concerned with animal rights and welfare) are given considerable importance.

Trends In The Global Ethical Food Market

Sustainable packaging is a leading trend adopted by ethical food manufacturers and producers. The companies engaged in organic food production are increasing their focus on sustainable packaging in order to reduce the use of plastics and go environment friendly.

Global Ethical Food Market Segments:

The global ethical food market is further segmented based on type and geography.
