The mobile payment technologies market consists of sales of mobile payment technologies and related services. This market deals with a method of payment that does not involve cash or cheques, but allows consumer to make immediate payments using portable electronic devices such as smartphones or tablets.

Trends In The Global Mobile Payment Technologies Market

The integration of Internet of Things (IoT) with mobile payments is an emerging trend in the mobile payment technologies market. IoT is a system of interrelated computing devices, mechanical and digital machines, or people that can transfer data over a network without requiring any human-to-human or human-to-computer interaction. The integration of IoT in mobile payment technologies eases the payment experience of consumers and merchants, ensuring smooth and efficient payments on both ends. Due to increased convenience and safety provided by IoT-based mobile payments, many people are moving towards mobile payment technologies
