

Increased Use Of Disposable Medical Products Due To COVID-19 Leads To Demand In The Medical Waste Management Industry

*The Business Research Company's
Medical Waste Management Global
Market Report 2021: COVID-19
Implications And Growth To 2030*

LONDON, GREATER LONDON, UK, April 8, 2021 /EINPresswire.com/ -- Our reports have been revised for market size, forecasts, and strategies to take on 2021 after the COVID-19 impact: <https://www.thebusinessresearchcompany.com/global-market-reports>

The rise in the use of disposable medical products in healthcare facilities is expected to drive the medical waste management market. In a healthcare setting, most of the products used are meant for single-use to limit cross-contamination among patients and decrease hospital-acquired infection. The use of single-use or disposal products surged due to the COVID-19 pandemic outbreak. The widely used disposables like surgical gloves, disposable bed sheets, masks, surgical gowns, syringes, intravenous saline bags, and others account for most of the hospital waste. Therefore, the rise in the use of disposable medical products is expected to drive the managing medical waste plant market.

Biomedical waste is generated during the diagnosis, treatment, and immunization of human beings or other living beings from healthcare facilities. The medical waste management market consists of the revenue generated from establishments providing services that include collection, transportation, storage, treatment, disposal, and recycling of such waste.

The medical waste management market covered in this report is segmented by type into bio-hazardous/infectious waste, non-hazardous waste, sharps, pharmaceutical, radioactive, others. The medical waste management market is also segmented by treatment into incineration, autoclaving, chemical treatment, others, by services into onsite services, offsite services, and by waste generator into hospitals, clinics, ambulatory surgical centers, pharmaceutical companies, biotechnology companies, others.
