The 3D print medical implants market consist of sales of 3D printed medical implants and related services. In 3D printing technology, an artificial three-dimensional physical object is created with the help of computer-aided design (CAD) or a magnetic resonance image (MRI), which can replace the missing or defective body parts, to give support or help recover a damaged biological structure. 3D printed medical implants include 3D dental crowns, 3D dental bridges, 3D acetabular hip implants and shoulder implants.

Trends In The Global 3D Printed Implants Market

Many companies in this market are collaborating with various hospitals and rehabilitation centers to provide customizable devices for specific needs of patients. These collaborations are aimed to be mutually beneficial for both, as the companies can use the network of the hospitals to promote their product and the hospitals would get customizable devices at their convenience.

Global 3D Printed Implants Market Segments:

The global 3D printed implants market is further segmented based on application, end users,
