PENTAGON 2000SQL

Working with the commercial sector, the United States government has developed the Cybersecurity Maturity Model Certification (CMMC) framework to provide protections for the Defense Industrial Base (DIB) and the supply chain of the Department of Defense (DoD).

> PENTAGON 2000SQL is the benchmark For over 30 years we've set the industry standard in fully integrated ERP systems for the Aerospace, Defense, Electronics, Power Systems Metals, MRO and more."
>
> *Zviel Mofaz*

The CMMC framework will support over 300,000 companies that make up the DIB, and will be rolled out in phases as a mandatory requirement over several years. The framework incorporates 5 levels of certification that range from basic safeguards for small business to advanced process optimization for large enterprises.

A key element of this comprehensive framework is to protect Controlled Unclassified Information (CUI) and Federal Contract Information (FCI). The new Pentagon 2000sql™ add-on module provides advanced user security and administration settings that control access for selected users of the system to selected data within the system while preventing other users from access to the specific data.

The current Pentagon 2000sql™ system security capabilities are advanced and allow control within the system of screen and field-level access for groups of users. But this new additional

capability provides another layer of controls for the data itself within the screens and the fields.

Benefits for implementation of the CMMC CUI add-on module include the ability to deploy internal controls for CUI data in compliance with a CMMC certification audit. This in turn will support the new contracting requirements of the Defense Industrial Base and the Department of Defense.

The CMMC Add-on module will be available for wide release in the 2nd qtr. of 2021
