

Netview Consulting Inc. Selects Turnium Technology Group for White Label SD-WAN Solution

Turnium chosen to connect anything, anytime and anywhere

NORTH VANCOUVER, BC, CANADA, April 20, 2021 /EINPresswire.com/ -- Turnium Technology Group, Inc. ("[TTGI](#)") is pleased to announce its SD-WAN solutions have been selected by [Netview Consulting Inc.](#) to provide cost-effective, multi-site, secure private networks for Netview's mid-market voice, managed services and cyber security customers.

"Turnium's managed service options plus its simple subscription business model gives me choice. Being able to deploy a SD-WAN solution to fulfill the requirements for a redundant network without having the client pay extra or deploy as a re-sold managed service helps me solve unique customer network and business challenges," said Mike Millar, Netview's Principal. "Turnium makes SD-WAN easier to present to customers looking to reduce their network budget and its unique packet-based link load balancing technology helps us to deliver customer needs for high quality voice and video."

TTGI's Channel Program provides Netview with three flexible deployment options: to deploy TTGI's SD-WAN as a white-label software platform hosted and controlled by the Channel Partner, to resell TTGI's Turnium turnkey managed SD-WAN service or to deploy unique networks for customers requiring their own dedicated SD-WAN instances.

"I'm pleased to welcome Netview to TTGI's Channel Program," said Logan Campbell, VP Sales. "Mike and the team at Netview are experts in technology and networking. They can clear the mud and create great outcomes quickly, while helping customers get the most cost-effective solution for their business. This makes them an incredible partner for TTGI."

TTGI SD-WAN solutions allow Netview to improve customer internet connectivity and provide reliable managed connections between customer sites and Netview's Hosted Voice/PBX platform. TTGI SD-WAN also enables Netview to provide automatic failover to ensure customers can compute and communicate through an outage by one of the customer's ISP. Turnium's solution enables Netview to deliver a private Wide Area Network (WAN) overlay with multiple disaster recovery options, control the various circuits in the network and view historic charting on critical metrics like outages, packet loss, latency and other metrics.

Founded in 2002, Netview Consulting provides business networking and cyber security solutions to mid-market businesses in Canada and the USA. Netview's complimentary Cyber Threat Analysis and Telecom Report ensures that Netview and the customer understand network strengths, weaknesses and opportunities. Netview provides recommendations, options and potential cost savings to customers qualifying for this Report at no cost.
