

# The Latest Peer-Reviewed Research: The Immediate Global Use of Ivermectin Will End the COVID-19 Pandemic

*A Panel of Leading Medical Experts Concludes that Ivermectin Should be Systematically and Globally Adopted for the Prevention and Treatment of COVID-19*

WASHINGTON, DC, UNITED STATES,  
May 6, 2021 /EINPresswire.com/ -- Peer

reviewed by medical experts that included three U.S. government senior scientists and published in the American Journal of Therapeutics, the research is the most comprehensive review of the available data taken from clinical, in vitro, animal, and real-world studies. Led by the Front Line COVID-19 Critical Care Alliance (FLCCC), a group of medical and scientific experts reviewed published peer-reviewed studies, manuscripts, expert meta-analyses, and epidemiological analyses of regions with ivermectin distribution efforts all showing that ivermectin is an effective prophylaxis and treatment for COVID-19.

“We did the work that the medical authorities failed to do, we conducted the most comprehensive review of the available data on ivermectin,” said Pierre Kory, M.P.A., MD, president and chief medical officer of the FLCCC. “We applied the gold standard to qualify the data reviewed before concluding that ivermectin can end this pandemic.”

A focus of the manuscript was on the 27 controlled trials available in January 2021, 15 of which were randomized controlled trials (RCT’s), the preferred trial of the World Health Organization, U.S. National Institutes of Health, and the European Medicines Agency. Consistent with numerous meta-analyses of ivermectin RCT’s since published by expert panels from the UK, Italy, Spain, and Japan, they found large, statistically significant reduction in mortality, time to recovery and viral clearance in COVID-19 patients treated with ivermectin.

To evaluate the efficacy of ivermectin in preventing COVID-19, 3 RCT’s and 5 observational controlled trial’s including almost 2,500 patients all reported that ivermectin significantly reduces the risk of contracting COVID-19 when used regularly.

Many regions around the world now recognize that ivermectin is a powerful prophylaxis and treatment for COVID-19. South Africa, Zimbabwe, Slovakia, Czech Republic, Mexico, and now, India, have approved the drug for use by medical professionals. The results as seen in this latest study demonstrate that the ivermectin distribution campaigns repeatedly led to “rapid population-wide decreases in morbidity and mortality.”

“Our latest research shows, once again, that when the totality of the evidence is examined, there is no doubt that ivermectin is highly effective as a safe prophylaxis and treatment for COVID-19,” said Paul E. Marik, M.D., FCCM, FCCP, founding member of the FLCCC and Chief, Pulmonary and Critical Care Medicine at Eastern Virginia Medical School. “We can no longer rely on many of the larger health authorities to make an honest examination of the medical and scientific evidence. So, we are calling on regional public health authorities and medical professionals around the world to demand that ivermectin be included in their standard of care right away so we can end this pandemic once and for all.”

The published research can be found in [the latest edition of the American Journal of Therapeutics](#).

About the Front Line COVID-19 Critical Care Alliance

The FLCCC Alliance was organized in March 2020 by a group of highly published, world renowned Critical Care physician/scholars – with the academic support of allied physicians from around the world – to research and develop lifesaving protocols for the prevention and treatment of COVID-19 in all stages of illness. Their MATH+ Hospital Treatment Protocol – introduced in March 2020, has saved thousands of patients who were critically ill with COVID-19. Now, the FLCCC’s new I-Mask+ Prophylaxis and Early At-Home Outpatient Treatment Protocol with Ivermectin has been released – and is a potential solution to the global pandemic.
