The point of care (POC) hemoglobin (Hb) A1C testing market consists of sales of POC HbA1C testing devices and related services. The POC HbA1C testing devices assess the average level of blood sugar over 2 to 3 months in an individual. POC HbA1C testing devices are designed to diagnose average levels of glucose in patients' blood and to control type I and type II diabetes mellitus. Diabetes is a chronic disease which occurs either when inadequate amount of insulin is produced by the pancreas or when the body cannot use the insulin it produces effectively. Insulin is a hormone that regulates blood sugar.

Trends In The Global POC HbA1C Market

Home HbA1C testing kits allow people with diabetes to measure their hemoglobin A1C levels at home. Home HbA1c tests can be carried out within a relatively short period of time. Most home HbA1c tests require a sample of blood from the finger and then the test result may be given in different ways depending on the kit. Some kits provide a numeric result, others may provide a yes or no whether the HbA1c value is above or below a certain number. Currently, due to the Coronavirus disease (COVID-19) p andemic, diabetic patients who seek to keep their distances

from hospitals and follow social distancing are increasingly using home kits to identify their risks and seek to maintain and manage their condition at home, whilst limiting their potential exposure to the virus.
