

Positive Airway Pressure Devices Market Is In Demand With Increasing Geriatric Population

*The Business Research Company's
Positive Airway Pressure Devices Global
Market Report 2021: COVID-19 Growth
And Change*

LONDON, GREATER LONDON, UK, June 9, 2021 /EINPresswire.com/ -- The increasing geriatric population is expected to contribute to the growth of the positive airway pressure (PAP) devices market in the forecast period. The geriatric population is more prone to sleep apnea diseases. The higher

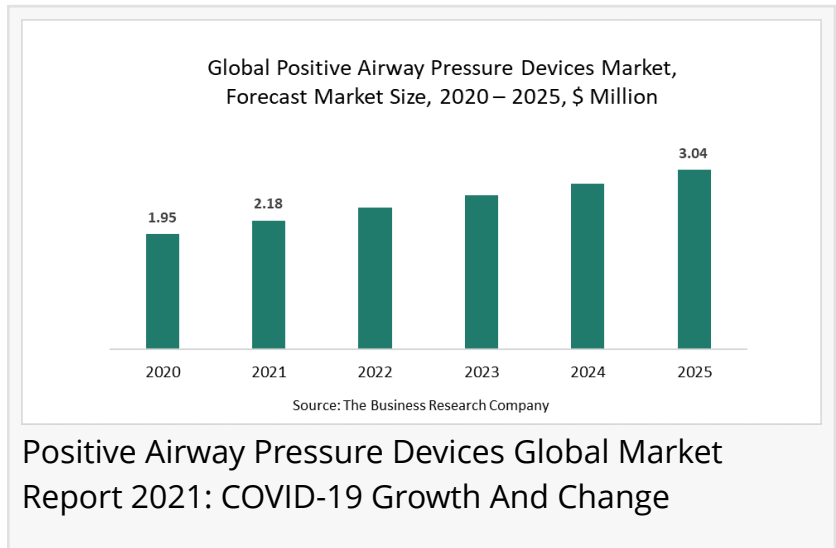

prevalence of obstructive sleep apnea (OSA) is related to the decrease in the size of the upper airway lumen because of the increasing age. According to the UN World Ageing Population 2020 report, there were 727 million persons aged 65 years or over in 2020, accounting for 9.3% of the total population. It is estimated that the ageing population will reach over 1.5 billion, accounting for 16% in 2050. Thus, the rising geriatric population as the existence of apnea is more prevalent in the geriatric population, and this likely to drive the market.

The [positive airway pressure devices market](#) consists of sales of positive airway pressure devices by entities (organizations, sole traders, and partnerships) that manufacture positive airway pressure (PAP) devices that are used to trap air under pressure into the airway of the lungs. It is widely used in the treatment of obstructive sleep apnea (OSA), snoring, and others. PAP devices include bands to position the mask, a pipe or tube to connect the mask to a device, and an air filter to purify the air entering the nostrils.
