>
> CampusGuard has extensive history in interpreting the application of regulatory standards, performing information security assessments, and providing gap reports to higher education environments."
>
> *Edward Ko, Director, Information Security*

The Cybersecurity Maturity Model Certification (CMMC) is utilized by the US Department of Defense (DoD) and builds upon the existing Federal Acquisition Regulation (FAR) and Defense Federal Acquisition Regulation Supplement (DFARS) regulations. The CMMC combines various cybersecurity standards and best practices in an effort to ensure all contractors are successfully protecting sensitive information and are capable of adapting to new and evolving cyber threats.

Failing to be certified to the appropriate CMMC maturity level will disqualify an organization from being awarded defense contracts that include the CMMC requirement and could put DoD grant funding at risk for research institutions. As a CMMC RPO, CampusGuard is focused on assisting organizations seeking certification (OSCs) prepare for CMMC assessments at all maturity levels (ML1 – ML5).

"CampusGuard is in a unique position to assist higher education organizations that require CMMC certification", explained Edward Ko, Director, Information Security for CampusGuard. "We have extensive history in interpreting the application of regulatory standards to higher education environments, performing information security assessments within those environments, and providing gap reports that contain actionable remediation items."

Full details of the services available can be found by visiting
