

# Parathyroid Hormone Industry Grows With Increase In Rate Of Osteoporosis Prevalence

*The Business Research Company's Parathyroid Hormone Global Market Report 2021: COVID-19 Growth And Change To 2030*

LONDON, GREATER LONDON , UK, June 11, 2021 /EINPresswire.com/ -- The rise in the prevalence of osteoporosis is expected to drive the market for parathyroid hormones. Osteoporosis is a disease characterized by low bone mass and deterioration of bone tissue which further leads to an increased risk

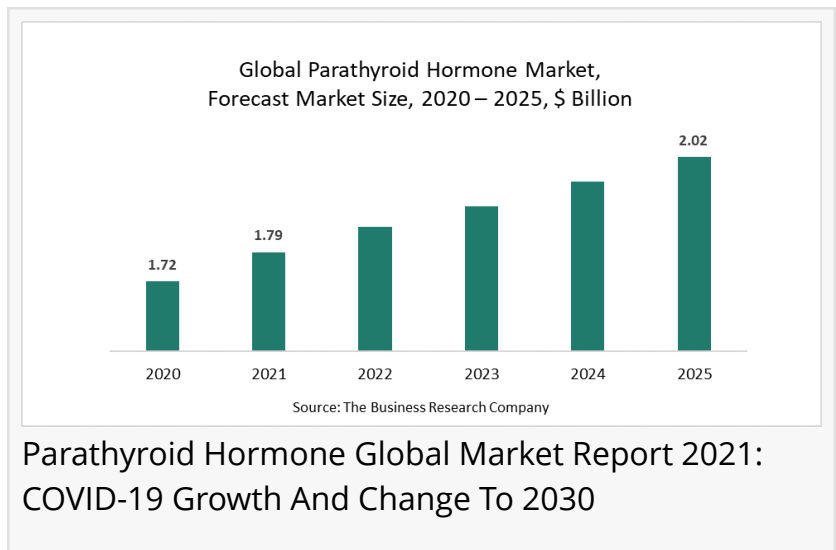

of fracture. According to the International Osteoporosis Foundation osteoporosis affects approximately 1.4 million Canadians, mainly postmenopausal women and the elderly. The parathyroid hormone, which is generally naturally produced by the body for regulating the calcium levels, is used to reduce the risk of bone fracture in people with osteoporosis and is administered as a daily subcutaneous injection. The increase in osteoporosis is therefore expected to contribute to the growth of the [parathyroid hormone market](#).

The parathyroid hormone (PTH) market consists of sales of parathyroid hormones and related services by entities (organizations, sole traders and partnerships) that develop parathyroid hormones to treat various diseases. Parathyroid hormone is responsible for regulating the distribution of phosphate and calcium in the body and is used in the treatment of diseases such as hypothyroidism and osteoporosis.
