AJMAN, UNITED ARAB EMIRATES, June 23, 2021 /EINPresswire.com/ -- Elmedia Player is a macOS media player with a wide array of supported formats and advanced streaming options. Elmedia offers playback control features, including external audio and subtitle tracks, Touch Bar support and playlist creation.

Eltima Software presents the newest release of Elmedia Player - version 8.0 - with enhanced interface and streaming. The new version provides official support for Apple M1 CPUs, and it works on the newest devices in the Mac lineup.

The 8.0 release version contains numerous improvements for the streaming feature. Newly-introduced Roku and AirPlay 2 support maximizes the assortment of devices that can be streamed to or received from. Apple Silicon M1 support will ensure that any modern Apple device - be it Mac, MacBook or an iMac - can install and run Elmedia without issues.

The interface saw many changes. Configuration menus have been restructured, and several options have been added. Among those, an option to show preview thumbnails on the timeline and an ability to go into the picture-in-picture mode.

Another new feature is the audio visualizer, which can be switched between several different modes.

Finally, the subtitles got a few additions. In 8.0, subtitle files can be saved from opensubtitles.org. Also, the subtitle box can now be moved.
