

Commercial Greenhouse Market Drivers Are The Increasing Global Population And Low Availability Of Arable Land

The Business Research Company's Commercial Greenhouse Global Market Report 2021: COVID-19 Growth And Change

LONDON, GREATER LONDON , UK, July 23, 2021 /EINPresswire.com/ -- With the increasing population, there is a related low availability of arable land – these are the key factors for the growth of the [commercial greenhouse market](#).

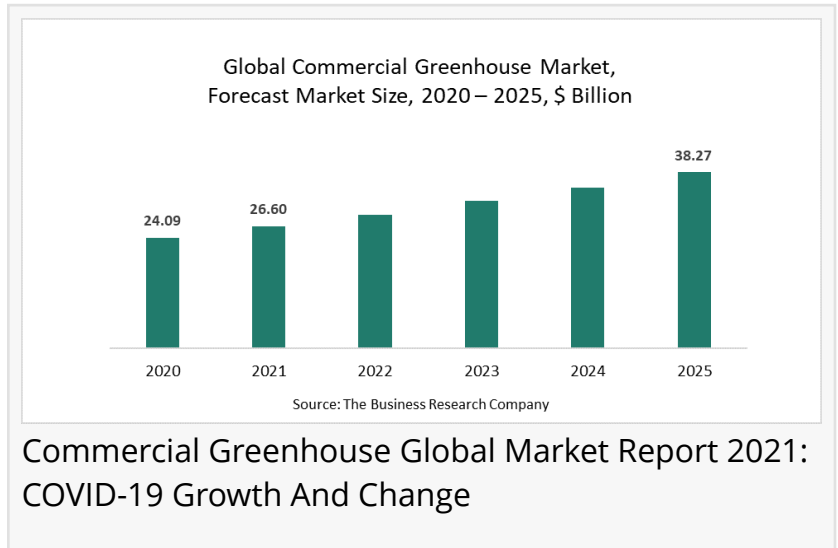

The vine seed production in greenhouse farming is more than double that of conventional cultivation attributing to regulated media and environmental conditions. According to a study published in 2019, the world's population will grow to 8.6 billion in 2030 and 9.8 billion in 2050, and food demand for world cereal equivalent (CE) food is expected to be around 10,094 million tons in 2030 and 14,886 million tons in 2050. Moreover, global food demand is estimated to have increased by 70% by the end of 2050. As a result, current arable land is under pressure to grow more food by using soil treatment devices. Thus, the situation of increasing food demand and decreasing arable land is expected to boost the growth of the commercial greenhouse market which provides better harvest both in terms of quality and quantity than the traditional methods.

Europe was the largest region in the commercial greenhouse market in 2020. North America is expected to witness the highest growth rate during the forecast period. The regions covered in the commercial greenhouse market report are Asia-Pacific, Western Europe, Eastern Europe, North America, South America, Middle East, and Africa.
