

The Urinary Incontinence & Pelvic Organ Prolapse Devices And Equipment Market Is Characterized By New Technologies

The Business Research Company's Urinary Incontinence & Pelvic Organ Prolapse Devices And Equipment Global Market Report 2021-COVID-19 Impact and Recovery

LONDON, GREATER LONDON, UK, July 30, 2021 /EINPresswire.com/ --

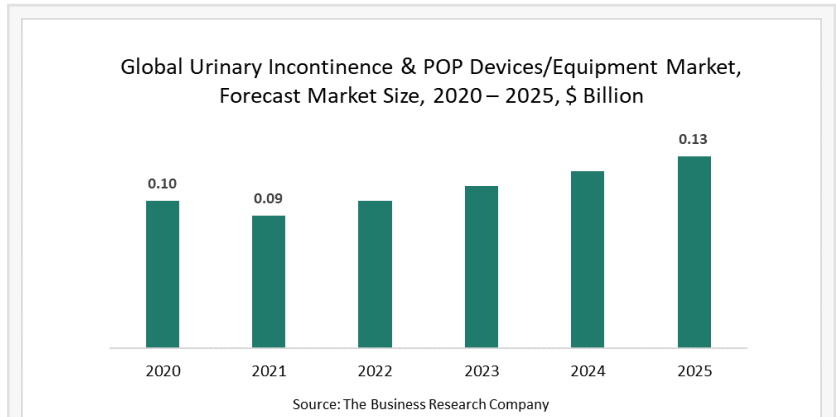

The urinary incontinence and pelvic organ prolapse devices and equipment industry is characterized by the increased use of several new technologies in recent years. There is a wide range of devices being developed to treat both POP and urinary incontinence. For instance, the Lyrette™ transurethral SUI system led by Verathon Medical UK Ltd is the only FDA approved treatment used for treatment of stress urinary incontinence (SUI) among women.

Devices such as such as Lyrette™ transurethral SUI system are used for procedures for incontinence, as trends in the [urinary incontinence treatment devices market](#). The treatment through Lyrette™ does not require the use of anesthesia or surgery, and instead it uses radiofrequency energy to tighten the tissue of the bladder. For the treatment of POP, companies are now focusing on using native tissue prolapse repair procedures instead of vaginal mesh after the adverse health issues from the usage of vaginal mesh were highlighted.

Major players in the urinary incontinence and pelvic organ prolapse devices and equipment industry are Boston Scientific Corporation, Coloplast Group, Ethicon US, Bard Inc., and Johnson & Johnson.
