

The Revolutionary DeFi Organization iNf4mation Allows Users to Take Control of Their Data

CHICAGO, USA, August 3, 2021

[/EINPresswire.com/](https://EINPresswire.com/) -- In the world of cryptocurrency, the decentralization of assets might be at the heart of its rapid rise, but [iNf4mation](#)'s user data still remains under the control of centralized institutions, which continue to be exploited for profit. To tackle it head on, a breakthrough blockchain-based DeFi project will be launched with a mission of helping its users take back the control of their personal and private data.

Based on the blockchain, iNf4mation is one of the first blockchain-based hybrid decentralized organizations in the DeFi space, developed to facilitate data control, exchange, and compliance. Not only will it provide users with easy control over their personal and private data, it will also enable them to monetize it using blockchain technology.

“

Our blockchain DeFi platform is pioneering the move to give us back control of our personal and private data”

Cory Warfield, LinkedIn influencer

iNf4mation also deploys state-of-the-art encryption and advanced data masking technology to ensure data integrity, consistency and security, without compromising on seamless decoding of user-approved data by businesses.

Having already gained strong traction among its loyal followers, iNf4mation is also delighted to have secured the support of renowned LinkedIn influencer Cory Warfield,

who will take up the position of Global General Manager.

Cory Warfield said, “It’s remains a major issue that despite attempts to decentralize our personal data, it is still fundamentally under the control of centralized institutions. Unless we can gain

greater control of our own data and confidential details, we all remain vulnerable to breaches and exploitation that can wreak havoc in our lives”.

"That's why it's an honor for me to join the team at iNf4mation. Our blockchain DeFi platform is pioneering the move to give us back control of our personal and private data. Added to that, by empowering us with an easy way to manage the control and compliance of our personal and private data, iNf4mation allows us all to exchange the tokenized value of the data in a decentralized manner. I am grateful to iNf4mation for their crusade in data privacy and am honored to be given an opportunity to contribute to the delivery of their great mission."

By securing the LinkedIn influencer, iNf4mation and Cory hope to work together to leverage his huge follower base and build interest, awareness and momentum to the upcoming blockchain DeFi platform launch.

The iNf4mation airdrop has launched on Telegram where users can complete simple tasks or refer their friends and family and earn free iNf4 tokens. Over 1,000,000 free iNf4 tokens have already been given away to >125,000 iNf4mation community members.

To be part of the iNf4mation airdrop, they have created a Public Telegram Group where users can complete simple tasks or refer their friends and family and earn free iNf4 tokens. Those interested can learn more about the airdrop at: https://t.me/iNf4mation_chat.

- iNf4mation is a breakthrough organization which is pioneering a DeFi approach to data control and management
- Allows users to take control of their personal data and monetize it
- Has gained notoriety and support, including social media influencer Cory Warfield who will become the new Global General Manager
- iNf4mation airdrop has launched and given away over 1,000,000 free iNf4 tokens to >125,000 iNf4mation community members

About iNf4mation

iNf4mation is a breakthrough blockchain-based DeFi organization that allows its users to take back control of their personal and private data and monetize their data's value. Their platform upholds a DeFi approach to data control and management that is hybrid, decentralized and interoperable. iNf4mation offers the customer control-over their data while making data regulatory compliant for businesses. To gain access to user data, businesses will have to subscribe to iNf4mation for access rights to declared customer data.

iNf4mation operates through two primary components – the iNf4mation Unique Customer View (iUCV) and the iNf4 token. The iUCV enables customers to decide what personal data they want and don't want to share with businesses. Additionally, the unique iNf4mation platform allows businesses to maintain data compliance by accessing only user-approved declared data.

The iNf4 token is an ERC-20 utility token which drives the whole iNf4mation platform. iNf4mation will be officially launched in the coming months, with further updates to come.
