

SNSfortech extends secure comms solutions for the global shipping industry with SigNet by Armour

Greek-based security solutions provider selects new secure comms tool to ensure total privacy for shipping and enterprise clients

LONDON, UNITED KINGDOM, August 5, 2021 /EINPresswire.com/ -- : [Armour](#)

[Comms](#), the leading provider of specialist, secure communications solutions, has deepened its partnership with [SNSfortech](#), an Athens-based cyber-security and data protection solutions provider. SNSfortech has introduced SigNet by Armour® to its range of secure communications tools for its security-conscious clients in the global shipping and enterprise markets.

“

At Armour we are committed to providing products that protect privacy, strengthen security and that people are happy to use, so that there is never a need to use a less secure alternative.”

*David Holman, Director,
Armour Comms*

Antonios Mytilinis, Director at SNSfortech commented, “Having worked with Armour for five years, the latest product SigNet has been an instant hit with our clients in the maritime sector. Clients have reported to us high rates of user adoption because SigNet is so easy to use, while supporting heightened security procedures when dealing with sensitive and private information.”

SigNet is based on the well-respected Signal app, and provides secure comms for voice, text, messaging, video and attachments. In addition, it provides enhanced

security features which include;

- One-step provisioning for end users – download the app, and they can start using it straight away
- Anonymity and protection of privacy – users do not need to reveal their mobile number, email address or even full name in order to use the app
- Use across multiple linked devices – the same instance of the app can be installed on desktop, laptop, tablet and mobile, so that information can be shared across devices securely, without ever using email

- Note to Self facility – voice to text notes and reminders that are held within the app, and can be shared with linked devices
- Can be installed on-premise for absolute privacy and protection of meta-data, or hosted on Armour’s secure cloud.
- A much improved interface provides a great user experience.

SigNet by Armour, is available for iOS and Android devices, and for use with Windows 10, macOS and Linux.

David Holman, Director, Armour Comms said, “Customers of SNSfortech, such as those in the maritime industry, have very stringent security requirements, not least because vessels are often required to sail through unfriendly waters. Owners are keen to protect their anonymity while still needing to convey instructions to their management teams, without fear of interception. At Armour we are committed to providing products that protect privacy, strengthen security and that people are happy to use, so that there is never a need to use a less secure alternative.”
