

Wild Horses: a Natural Resource for Staving off Wildfires and the Impacts of Global Warming

Wild Horses a Free and Natural Resource Staving off Wildfire and Global Warming Devastation

WOODACRE, CA, USA, August 6, 2021 /EINPresswire.com/ -- Do free-roaming wild horses protect America's vast open Western rangelands from fire and global warming? A recent scientific report

“

Man does not weave this web of life. He is merely a strand of it. Whatever he does to the web, he does to himself.”

Chief Seattle

answers this question with an emphatic "Yes!" the presence of wild horses play a critical role in keeping wildfire top-loading fuel at bay, sequester carbon, and add moisture to arid soils.

Love Wild Horses®, a grassroots California-based 501c3, created this wild equine and carbon sequestration research with Craig Downer, a forty-year wild equine expert wildlife ecologist. LWH's and Downer's scientific

articles highlight the many benefits that free-roaming wild horses freely gift to America's Western wild public and private lands.

Considering this new scientific evidence, the announced mass removal of more than 6,000 healthy, wildfire and global warming preventing wild horses in the West to begin on September 1st by the Bureau of Land Management, the agency assigned by a 1971 [Law](#) to protect wild horses and burros as an integral part of the ecosystem and to protect the health of public lands and at the expense of the American tax payer, is causing public outrage amongst thousands of concerned environmental and animal protection advocates and organizations.

The Department of Interior agency's incongruent actions, which appear to be entirely out of alignment with President Joe Biden's Climate Change and [30/30](#) initiatives, will unnecessarily cost the taxpayers over one billion dollars annually and the [welfare of the public lands](#) and the survival of the last of America's wild horses, if unstopped.

The Nonprofit Love Wild Horses seek suitable open grasslands in Northern California and North Eastern Nevada to create natural wild equine cost-effective fire abatement and soil-regeneration land management studies.

Citizens who care to help are encouraged to call and e-mail their legislatures and Secretary Deb Haaland @ 202-208-3100 and President Joe Biden @ 202-456-1111 Urge them to please Enact Executive Orders to

1. Issue an immediate moratorium on the Bureau of Land Management wildfire, global warming, and ecosystem protecting wild horse removals.
2. Return the 65,000 at-risk government incarcerated wild horses to roam freely to save them and to allow the horses to protect our vast open rangelands once again.
3. Support Wild Equine Re-Wilding-Wildfire-Global Warming-Ecosystem Protection-Regenerative Studies to make our wild open Western lands and surrounding communities safer and to heal soils and by restoring wild horse herds to genetic viability and to save tax payers over one billion dollars annually.

The upcoming unnecessary removal of 6,000 healthy wild horses is announced, by the Bureau of Land Management due to drought; ignoring the recent rainfall in the West, that negates the emergency need to remove the horses.
