Hybrid dual protection with cloud and offline drive management (ODM) at edge provides diversified resilience and maximized data availability

Orange, CA., August 17th, 2021 – Apace, a leading cloud and edge media workflow provider, announces availability of edge and cloud backup solution.

Data is simultaneously backed-up to cloud and to edge on Apace ODM (Offline Drive Management system) automatically. Data stored on ODM drives can be removed offline to prevent unauthorized access. Workflow enables both geo diversification and resilience while protecting against ransomware and viruses. Encryption, validation and delta backup are available for both edge and cloud solutions.

Apace can also provide software to manage offline data with search and annotating, and further for media it can keep auto generated proxies always online for playback, all as added options.

“Apace complete media aware workflows offer unique backup solutions for resilience and always-on media access against ransomware and viruses” said Dr. Lee President and CTO of Apace.
