Large scale manufacturing process to improve fresh food packaging have remained cynosure for the engaged stakeholders in the industry. As a result, the Europe fresh food packaging market has witnessed an increase in innovation during the last few years. Introduction of technologies like nanotechnology and biotechnology has revolutionized the Europe fresh food packaging market growth. Technologies, such as edible packaging, micro packaging, anti-microbial packaging, and temperature-controlled packaging are all set to revolutionize food packaging market. The ability to deploy large scale manufacturing and innovate competitive technologies has been recognized as the next key driver for the Europe fresh food packaging market.

Cellulose nanocrystals also known as CNCs are now being utilized for food packaging. CNCs

provide advanced barrier coatings for food packaging. Derived from natural materials such as plants and woods, cellulose nanocrystals are biodegradable, nontoxic, have high thermal conductivity, sufficient specific strength, and high optical transparency. These features make it an ideal component for advanced food packaging. CNCs can be easily dispersed in water and have crystalline nature. As a result, manufacturers in Europe fresh food packaging industry can control packaging structure to annihilate free volume and can optimize its properties as a barrier material.
