

# Global Finished Wood Products Market Trends, Strategies And Opportunities In The Finished Wood Products Market 2021-2030

*The Business Research Company's Finished Wood Products Global Market Report 2021: COVID-19 Impact And Recovery*

LONDON, GREATER LONDON, UK, August 23, 2021 /EINPresswire.com/ -- According to the new market research report '[Finished Wood Products Global Market Report 2021](#): COVID-19 Impact And Recovery To 2030' published by The Business Research Company, the finished wood products market is expected to grow from \$2.52 trillion in 2020 to \$2.65 trillion in 2021 at a compound annual growth rate (CAGR) of 5%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$3.42 trillion in 2025 at a CAGR of 7%. Greater economic growth is likely to drive public and private investments, joint ventures, foreign direct investments in the end-user markets, thereby driving the market during the forecast period.

The finished wood products market consists of sales of finished wood products by entities (organizations, sole traders and partnerships) that produce finished wood products including wood products such as wooden windows and doors, cabinets, kitchenware and wooden mobile homes, and other products.

## Trends In The Global Finished Wood Products Market

Companies in the finished wood products market are using 3D printing to develop lightweight structural as well as non-structural wooden products. 3D printing creates a three-dimensional physical object using a digital design. The technology creates three-dimensional objects using

models which are constructed using a brown, very fine, granular powder made from wood chips. 3D printing is used to manufacture wooden products with complex geometries quickly at low cost. 3D printing helps in rapid prototyping, increases assembly line efficiency, lowers turnaround time, improves flexibility in design and reduces wastage of materials thus indicating high potential for this technology. For instance, in 2019, ORNL and UMaine 3D printed a large mold used to fabricate yacht using wood flour, cellulose nanofibrils and PLA.

#### Global Finished Wood Products Market Segments:

The global finished wood products market is further segmented based on type, application and geography.

By Type: Millwork, Prefabricated Home, Wood Pallets & Skids, Other Finished Wood Products

By Application: Household, Commercial

By Geography: The global finished wood products market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa. Among these regions, the Asia-Pacific finished wood products market accounts for the largest share in the global finished wood products market.

Subsegments Covered: Wood Window And Door, Cut Stock, Resawing Lumber, And Planning, Other Millwork (including Flooring).
