The immunochemistry diagnostic devices and equipment market consists of sales of immunochemistry diagnostic devices and related services. Immunochemistry diagnostic devices and equipment are designed to diagnose diseases or conditions by studying the functions of the immune system through analyzing the nature of specific proteins, antigens, antibodies, and their interaction.

Trends In The Global Immunochemistry Diagnostic Devices And Equipment Market
Companies in the immunochemistry diagnostic devices and equipment market are increasingly

investing in automated immunoassay systems. This is mainly because automation has led to an increase in the capabilities of diagnostic devices in testing higher volumes of patient specimens. In addition, the development of various integrated clinical chemistry systems has immensely improved the efficiency of the analytical phase of clinical chemistry laboratory testing and led to further automation. For example, ichroma-50 is an automatic immunoassay analyzer of Boditech Med Inc. that measures the concentration of the targeted analyte in body fluids such as blood, urine, and other samples in few minutes, and reduces the labor cost and human error in the process.
