

INFLOR partners with American Forest Management to expand growth in the U.S.

Leading forestry software company brings forest technology innovation with AFM partnership

ORLANDO, FL, U.S., August 27, 2021 /EINPresswire.com/ -- [INFLOR](#), the Latin American leader in bio-asset management, partnered with American Forest Management (AFM) to implement efficient forestry technology to expand across the United States, as well as globally.

Being at the forefront of providing [forestry solutions](#) from seed to harvest, INFLOR unifies companies' systems in order to control and manage data across the board. Through the recent partnership, INFLOR has been able to expand AFM, the largest land consulting and real estate brokerage firm in the U.S., business by integrating data, reducing costs and creating better solutions across the company. In return, AFM has allowed INFLOR to grow their business in the United States – forestry software company now manages over 2.1 million acres in the U.S.

“We’ve perfected a unified system to manage companies’ forestry needs,” said Antonio Tatagiba, CEO at INFLOR for the United States. “We are not just an IT company; we are able to create a relationship, exchange data and achieve the goals and results for each company we partner with. With AFM we were able to provide them the solutions they needed for growth.”

With over 20 years of experience in the forestry business, INFLOR has become the leader in agribusiness management – resulting in over 29 million acres of forests managed by the company. Mastering the production of eucalyptus, the company has been able to apply that technology to adapt to different forestry companies across four continents. Their ability to grow

Map of land managed by American Forestry Management using INFLOR technology.

with a client and help across the board by bringing together all aspects of forest management has enabled INFLORE to produce great success in their partnerships.

“In working with Inflor, we have been able to implement many system enhancements that would have not been possible without our partnership,” said Stephen Eddins, Director of Technical Services at AFM. “It worked well because AFM wanted to stay at the forefront of technology. We needed to be able to offer our services in all regions where we managed land and all regions where we hoped to manage land or data in the future. We can now manage timberland data on a worldwide scale – it does not have to only be in North or Central America. On the INFLORE side, they have established significant market share in South America and other regions, but now with AFM they are establishing a footprint in North and Central America. It’s a good partnership to help each other grow.”

In working with INFLORE, AFM has implemented [INFLORE forest management](#), GISagri, as well as cloud services & hosting, and plan to add additional solutions in the future. The partnership has resulted in expansion, cost savings and AFM positioning themselves as a leader in industry technology.

This mutually powerful partnership aims for even more growth and innovation in the forest management industry. For more information on INFLORE and American Forest Management’s partnership, visit <https://www.inflorglobal.com/case-studies>.
