

Latest Cataract Surgery Devices And Equipment Industry Trends Involve Laser Technology

*The Business Research Company's
Cataract Surgery Devices And Equipment
Global Market Report 2021 - - COVID-19
Impact And Recovery*

LONDON, GREATER LONDON, UK,
September 3, 2021 /EINPresswire.com/

-- The cataract surgery devices and equipment market has witnessed many positive changes introduced by the market players, the most prominent one being the introduction of laser technology. Laser assisted cataract surgery is used to gather information about the lens, to make the corneal incision and for the opening in the lens capsule. The advent of laser technology has caused a significant impact over this industry by bringing in new levels of safety and accuracy and advancing cataract surgery. Femtosecond laser platforms have significantly contributed to the precision of cataract surgeries being performed and may soon surpass the traditional hand-held surgeries. For example, Abbott Laboratories which lacked this technology, acquired Optimedica for \$250 million to enter laser cataract surgery devices market after witnessing the huge demand and benefits of laser technology.

[The global cataract surgery devices market size](#) is expected to grow from \$4.99 billion in 2020 to \$5.62 billion in 2021 at a compound annual growth rate (CAGR) of 12.6%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$7.16 billion in 2025 at a CAGR of 6.2%.
