

Rhinoplasty is one of the most commonly performed reconstructive cosmetic surgery across the globe and around 207,284 rhinoplasty cosmetic surgeries were performed throughout the world in 2019. As part of the post-operative procedure, intranasal splints are used to promote hemostasis, structural support and minimize scar formation. Therefore, owing to the rising numbers of rhinoplasty surgery and use of nasal splints for post-operative care, the nasal stents market is forecasted to grow.

The [global nasal splints market](#) is expected to grow from \$1.35 billion in 2020 to \$1.49 billion in 2021 at a compound annual growth rate (CAGR) of 10.4%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$1.73 billion in 2025 at a CAGR of 3.8%.
