-- According to IMARC Group's latest report, titled "Pest Control Market: Global Industry Trends, Share, Size, Growth, Opportunity and Forecast 2021-2026", the [global pest control market exhibited moderate growth](#)

during 2015-2020. Pest control assists

in eliminating the growth of bacteria and insects and prevent damage from animals with the use of numerous chemicals, including fipronil, bifenthrin and boric acid. These solutions assist in controlling the development of cockroaches, rodents and mosquitoes across residential and commercial spaces to prevent the risks of various vector-borne diseases. Apart from this, it is widely used in the agricultural sector to protect crops and commercial woods.

The global market is primarily driven by the rising incidences of vector-borne diseases, such as typhoid, dengue and plague, across the globe. Moreover, the growing environmental concerns have encouraged numerous companies to introduce natural and organic pesticides, thereby creating a positive outlook for the market. Other factors, including inflating disposable incomes of the masses and extensive research and development (R&D) activities conducted by key players to introduce innovative product variants to improve crop yield, are providing an impetus to the market growth further. Looking forward, IMARC Group expects the global pest control market to grow at a CAGR of around 5% during the forecast period (2021-2026).
