

# Process Specialist HPS Product Recovery Solutions Signs Exclusive Distributor Agreement with Newly Formed Dutch Company

*Hygienic Process Systems BV is now the official distributor of HPS Product Recovery Solutions 'Pigging' Technology in The Netherlands and Belgium*

NOTTINGHAM, NOTTINGHAMSHARE, UNITED KINGDOM, September 22, 2021 / EINPresswire.com/ -- HPS Product Recovery Solutions, the leading UK-based experts in liquid product recovery ([pigging](#)) systems for process industries, has appointed newly formed Hygienic Process Systems BV as their official distributor in the Netherlands and Belgium.

Based in Breda, the Netherlands, Hygienic Process Systems BV will work in partnership with HPS Product Recovery Solutions to deliver pigging and liquid transfer projects to companies throughout the Netherlands and Belgium.

HPS Product Recovery Solutions is a UK company with offices in the US, Australia and a network of agents and distributors throughout the world.

Hygienic Process Systems BV has been set up to sell HPS pigging systems and liquid transfer equipment in the Netherlands and Belgium. They will also offer complimentary process equipment from other suppliers.

Hygienic Process Systems BV is also the official, exclusive supplier in the region for HPS Product Recovery Solutions spare parts and accessories, including pigs, 'AccuTect' pig detectors, seal kits, valves, and other components.

## What Is HPS Pigging Technology?

HPS pigging technology is in use throughout the world by companies that process liquids, especially those in hygienic (sanitary) environments. These include companies that manufacture foods, beverages, paints, coatings, household goods, and personal care products, and many others.

Pigging works by propelling a specialist, flexible projectile (the 'pig'), through a pipeline. The pig

has a diameter slightly larger than the pipe's internal diameter, so it recovers practically all the residual product left after a product transfer. This product can then continue to be processed or sold, rather than being flushed to waste.

The [benefits of pigging](#) include increased yields, less water and chemical usage, lower waste treatment costs, faster product changeovers, and reduced risk of contamination.

Because it reduces waste and cuts down on the use of water and chemicals, it's a green technology that's kind to the environment. But in addition to the environmental benefits of pigging, companies that use HPS technology gain significant financial returns.

Gilbert Murphy, HPS CEO said

"Working with Hygienic Process Systems BV will help us introduce our technology to more companies in the Netherlands and Belgium, and help these companies increase yields, reduce waste, operate more efficiently and improve their environmental sustainability"

Robert Zuiderveld, General Manager at Hygienic Process Systems BV added,

"There are a lot of companies in The Netherlands and Belgium in a wide variety of different industries, which can really benefit from HPS pigging technology and solutions. Recovering residual liquids from using pigging is one of the most financially and environmentally sound ways to increase yields and efficiency while helping achieve waste reduction and sustainability goals".

New Market Focus

Although during its 25-year history HPS has supplied pigging equipment to The Netherlands and Belgium, it's not a territory they have particularly focussed on.

Gilbert continued,

"While we have worked with companies in the Netherlands and Belgium before, we have not actively targeted the region, and therefore have limited market penetration".

"The team at Hygienic Process Systems BV have an in-depth understanding of process industries in The Netherlands and Belgium, coupled with high levels of technical knowledge and experience. We're looking forward to working with them!"

Robert stated,

"We are excited about this partnership and proud to be working alongside the market leader and specialist in process pigging. HPS provides a high quality, proven technology, which will deliver

our clients a high return on investment, as well as helping them improve their environmental credentials”.

#### About HPS Product Recovery Solutions

Founded in 1995, HPS Product Recovery Solutions (Hygienic Pigging Systems Ltd) increases its customers' profitability by maximizing product yields, reducing waste, helping environmental sustainability, and improving efficiency. This is through product recovery and hygienic and [sanitary pigging systems](#) and liquid transfer solutions for processing industries.

Headquartered in Nottingham, UK, HPS has offices in the US, Australia, and global partners worldwide, including Brazil, India, Malaysia, Thailand, and Mexico.
