According to the National Alopecia Areata Foundation (NAAF), in 2017, 6.8 million people in the U.S. were affected by alopecia. Alopecia is a common autoimmune skin disease that cause hair loss on the scalp, face, and sometimes on the other areas of the body. Similarly, in Europe, baldness has been a common issue among its population. Countries such as Czech Republic, UK, Spain, and Germany have higher number of bald people. This has resulted in rise in number of clinical institutions and hospitals for hair loss treatment in Europe and North America. As per the International Society of Hair Restoration, nearly 33,194 surgeries were carried out annually in

2015 in Europe.

Men and women experience hair loss differently. Men may begin gradually losing their hair as early as their teens, typically from the hairline and the crown of the head. Women may have noticeable hair loss at age 40 or later, with generalized thinning over the scalp, and particularly at the crown. Among the two, men have reported to have higher number of hair loss problem as compared to women. Follicular unit extraction (FUE) and follicular unit transplantation (FUT) are the two major types of hair restoration treatments that have been gaining popularity. Some of the key service providers such as Direct Hair Implantation International and Elite Hair Restoration effectively promote these two treatments among their target customers.
