

# What Drives The Cervical Cancer Diagnostics Market?

*The Business Research Company's  
Cervical Cancer Diagnostics Global  
Market Report 2021 - COVID-19 Growth  
And Change*

LONDON, GREATER LONDON, UK,  
September 21, 2021 /

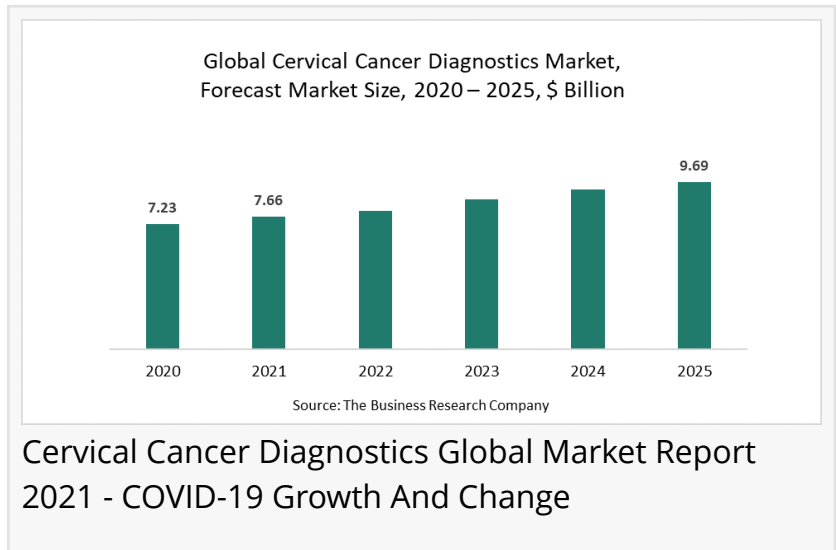

EINPresswire.com/ -- The rising  
adoption of cervical cancer diagnostic  
tests for the early detection of cervical  
cancer is expected to drive the market  
for cervical cancer diagnostics.

Increasing awareness among women  
about cervical cancer along with the emphasis by worldwide cancer organizations and  
governments on early testing for detecting cervical cancer and preventing it contributes to the  
growth of the market. For instance, in August 2018, the United States Preventive Services Task  
Force has updated its screening guidelines for cervical cancer, which specifies that women  
between ages 21 to 29 should be screened with a Pap test every 3 years, women between ages  
30 to 65 should be screened with any of three tests, namely high-risk HPV testing alone, Pap and  
high-risk HPV contesting for every 5 years and Pap test alone for every 3 years. The rising  
adoption of cervical cancer diagnostic tests and emphasis on early diagnosis propels the market.

[The global cervical cancer diagnostics market size](#) is expected to grow from \$7.23 billion in 2020  
to \$7.66 billion in 2021 at a compound annual growth rate (CAGR) of 6%. The growth is mainly  
due to the companies resuming their operations and adapting to the new normal while  
recovering from the COVID-19 impact, which had earlier led to restrictive containment measures  
involving social distancing, remote working, and the closure of commercial activities that resulted  
in operational challenges. The cervical cancer screening market is expected to reach \$9.69 billion  
in 2025 at a CAGR of 6%.
