Covid-19 scenario:

- During the coronavirus pandemic, operations regarding production and supply of dairy alternatives have not been affected much as it comes under "essential goods" category.
- However, research & development activities have been halted by manufacturers of dairy alternatives during the outbreak.

Dairy alternatives are plant-based natural and chemical free milk products derived through grains, seeds, or nuts. Dairy alternative products act as a substitute for consumers who are allergic to dairy products or people who are on a vegan diet. Some of the major alternatives to dairy are non-dairy milk, ice cream, cheese, yogurts, juice, energy drinks, and soft drinks.

The factors that drive the dairy alternatives market growth include health benefits associated with consuming plant based milk as they are high in micro and macronutrient content as well as low in fat and cholesterol content. The rise in fitness concerns among people in different regions has also helped the market. Additionally, increase in the number of lactose intolerant population, growing trend of veganism, and rise in disposable income also drive the market growth. However, increase in cost of raw materials due to unpredictable weather and high cost of production are expected to hamper the growth of market during the forecast period. Rise in the demand for alternatives to dairy by health-conscious consumers and frequent introduction of new flavors & variety are expected to provide numerous opportunities for expansion of the dairy alternatives market.
