

Business Reporter: IoT enabled business transformation works best with the right technology partner

How a connected approach to IoT device management and connectivity can help businesses make the most of a maturing technology to transform their business

LONDON, UNITED KINGDOM, September 22, 2021 /EINPresswire.com/ -- In an Industry View piece on Business Reporter, Pelion a recognized leader in the IoT Services space, explains how businesses risk failure if they try to piece together their IoT architecture from multiple providers. Setting up and running an IoT solution can be tremendously complex with requirements ranging from providing optimum connectivity and deploying software and security patches over-the-air to adding intelligence and deploying applications at the edge.

The use cases for the implementation of IoT technology are endless, and the list of areas where impressive cost savings and efficiencies can be achieved are getting longer by the day. With the help of predictive maintenance machine parts can be replaced before their end-of-life at a fraction of the cost of repair. Fleets' movements become trackable when IoT-based telematics are installed, which can massively increase efficiency and improve utilisation. Meanwhile, IoT renders supply chains more transparent and smart cities multiple times more cost-efficient and liveable than their legacy versions are.

However, getting started can be difficult and there are some critical capabilities that companies must consider before partnering up with an IoT solution provider...

Following an early adoption period of about 5 years up to 2017, when a high percentage of IoT projects failed, the IoT technology is now about to mature. Finding the ideal connectivity and device management partner in this environment can pave the way for long term success.

•• About Pelion ••

Pelion is an IoT spin-off of the Cambridge-based British semiconductor and software design company Arm. It provides secure global cellular connectivity and feature rich management for any IoT device or edge application. Its origins have provided Pelion with a deep industrial knowledge and a vast ecosystem of partners. With Pelion simplifying the development, deployment and management of an IoT solution, a business can focus on what it does best.
