

How Do You Make The Chemicals Market Eco-Friendly?

*The Business Research Company's
Chemicals Market Report - COVID-19
Impact And Recovery*

LONDON, GREATER LONDON, UK,
September 23, 2021 /
EINPresswire.com/ -- Chemical
companies are increasingly adopting
sustainable and ecofriendly processes
to eliminate negative impacts of
chemical manufacturing on the
environment. Evolution in technology
and chemical sciences enabled

chemical companies to utilize alternative fuels to produce chemical products. They are using naturally available carbon dioxide to produce fuels, industrial products and other substances. For instance, Akzo Nobel N.V a chemicals and coatings giant is planning to make a seven-figure investment into Green Lizard Technologies' patented process to make surfactants from plants rather than from oils.

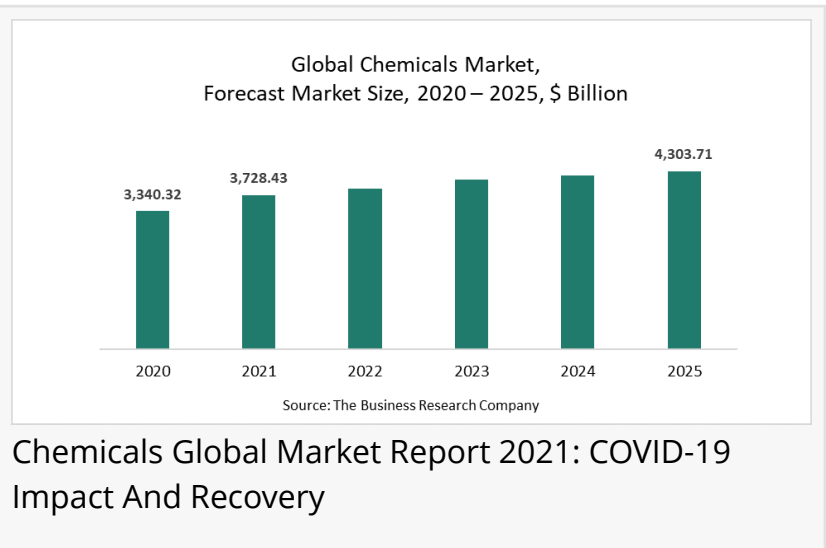

The global [chemicals market](#) size is expected to grow from \$3340.32 billion in 2020 to \$3728.43 billion in 2021 at a compound annual growth rate (CAGR) of 11.6%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$4304.71 billion in 2025 at a CAGR of 4%.
