

Computer Storage Devices And Servers Market Growth, Drivers, And Restraints

*The Business Research Company's
Computer Storage Devices And Servers
Global Market Report 2021 - COVID-19
Impact And Recovery*

LONDON, GREATER LONDON , UK,
September 27, 2021 /

EINPresswire.com/ -- Data volume
generated from personal devices and
various business operations in many
industries is rapidly increasing; this is
expected to drive the demand for
storage devices during the forecast

period. For instance, the total data generated worldwide is projected to reach 163 zettabytes (ZB) by 2025. In order to manage this rising data volume, the demand for storage devices from both corporate and individual customers is expected to drive the [computer storage devices and servers market](#) in the forecast period.

The global computer storage devices and servers market size is expected to grow from \$72.45 billion in 2020 to \$77.00 billion in 2021 at a compound annual growth rate (CAGR) of 6.3%. The growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$89.67 billion in 2025 at a CAGR of 4%.

Network-connected storage (NAS) devices such as RAID (redundant array of independent disks) based NAS and cloud-based NAS are susceptible to hacking, malware and other virus attacks. The increase in data availability and accessibility also increases vulnerability to malicious threats and attacks. An attack on network-attached storage can cause loss of intellectual property, business continuity and customer confidence. It can also huge revenue loss to companies depending on the severity of the network attack. Therefore, vulnerable network connected storage device hamper the growth of the computer storage devices and servers market.
