EL DORADO HILLS, CALIFORNIA, UNITED STATES, October 5, 2021 /EINPresswire.com/ -- Chula Vista Police Department (CVPD), with its nationally recognized drone program selected AirData UAV to assist in providing drone flight transparency to the public. AirData now offers Chula Vista residents the ability to view and understand the exact location, flight path, and purpose behind each police drone deployment.

"Transparency and accountability are key components in the success of our drone program which has been an invaluable tool in maintaining the safety of our officers and the public. We pride ourselves on ensuring the public has access to our drone flight information in upholding the trust of our community." - Chief Roxana Kennedy, Chula Vista Police Department

CVPD has been an innovator in the industry bringing its drone program to light in October of 2018. Since then, the program has continued to expand its capabilities and now provides additional transparency to constituents through the partnership with AirData. The CVPD Drone Program Historical Flight Data page is available here: https://app.airdata.com/u/cvpd
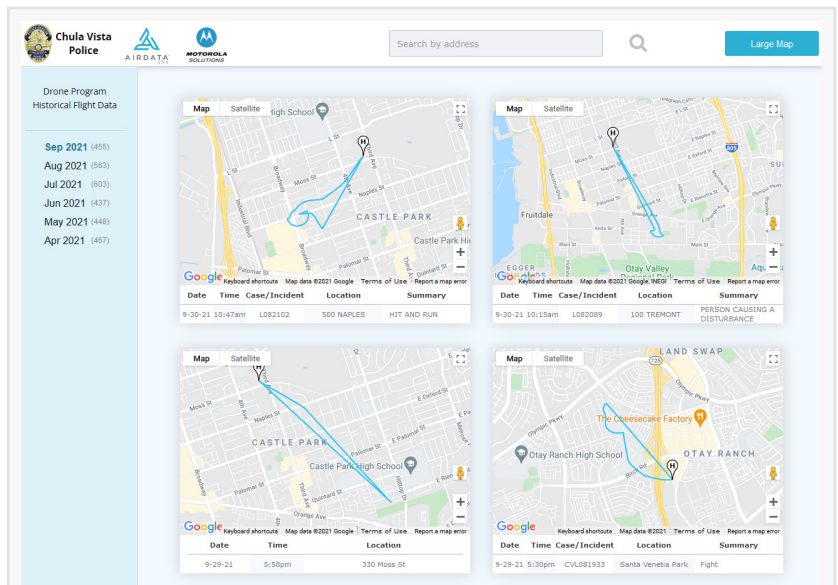

AirData provides CVPD with a seamless and simple way to track and manage all of the flight data from their missions. Officers can focus on what's important - keeping the community safe with
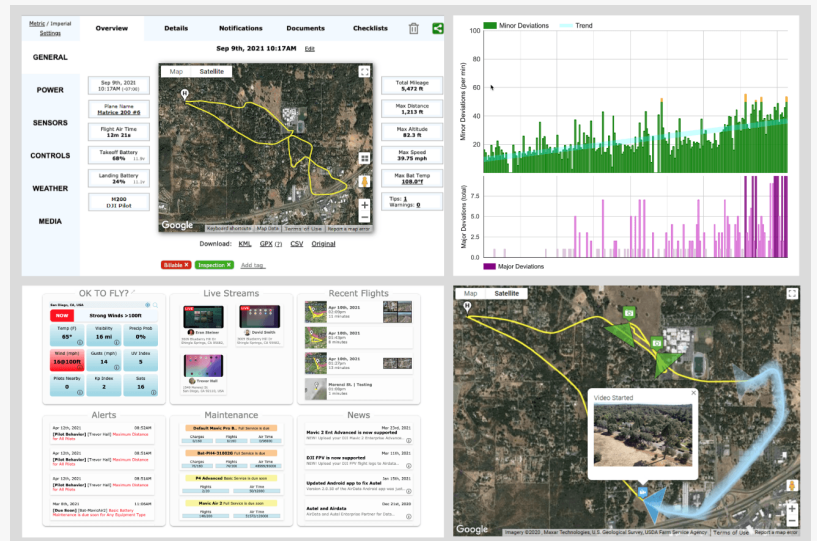

drone technology, letting the integration provide effortless data collection and automatic reporting. Federal compliance, reporting, maintenance notifications, and logging are time-intensive tasks, and AirData manages these tasks in the background, enabling police departments to focus on keeping the community safe.

"We are excited to work closely with Chula Vista to provide full transparency of the police department flights to the community," said Eran Steiner, Founder and CEO of AirData UAV. "AirData enables officers to focus on the community, while AirData performs the mundane and time-consuming work of flight data collection, federal compliance tracking, and crash prevention through tracking drone health. Chula Vista offers its residents an open AirData-driven web page, enabling the public to be well informed of drone-related law enforcement activity."

AirData UAV is an industry leader in drone fleet management and offers a robust integration for departments looking to benefit from a comprehensive Drone as First Responder (DFR) program. Communities immensely benefit when using DFR callouts by saving lives, reducing response times, and saving tax dollars while increasing citizen and officer safety.
