

Accel Research Sites NeuroStudies celebrates grand opening

Decatur clinical trial site expands, adds jobs

ATLANTA, GEORGIA, UNITED STATES, October 5, 2021 /EINPresswire.com/ -- Accel Research Sites NeuroStudies will celebrate its new state-of-the-art clinical trial facility with a grand opening event Oct. 7 in Decatur. The new research facility will mean good things for patients, doctors and the greater Atlanta area alike.

The company's CEO, board members and shareholders will be onsite to tour the new facility for the grand opening and welcome the first patient.

The new building, located at 755 Commerce Drive Suite 200 Decatur, GA 30030, features 10,845 square feet of space. It includes a Phase I unit, which allows doctors to provide a high level of care while patients can relax more comfortably in the clinic rather than in a hospital. It also features overnight accommodations, 10 exam rooms, an onsite pharmacy, labs and nine radar assessments to support the clinic's neurology activities. The new space was designed for optimal flow and function for researchers and patients.

Accel Research Sites NeuroStudies made the move to the larger, modern building, designed from the paint chip up to support the advancement of medicine and science through clinical trials. The new facility also means job growth for the company.

Accel hopes to bring on additional physicians, as well as add 10 new jobs to the area. The site specializes in neurology and its team has completed dozens of clinical trials in the field. Even so, the new facility will allow the team to expand their study capabilities, including for trials like an upcoming COVID-19 booster trial.

"We're already proud to have served the Decatur area and beyond with cutting-edge clinical trials," said Dr. Marshall Nash, principal investigator for Accel Research Sites. "We're excited to be able to do even more for our patients, our community and the world through the work we're going to be able to do in this incredible new building."

Dr. Nash added that patients come from all over Georgia and even around the world to be able to participate in some of the latest trials, especially for diseases like Alzheimer's. The trials help further knowledge of diseases as well as develop groundbreaking treatments.
