

# Next Generation Biofuels Market is Projected to Hit \$59.4 Billion by 2030

*Increase in necessity to produce sustainable & clean energy with negligible environmental impact have boosted growth of global next-generation biofuels market.*

PORTLAND, OREGON, UNITED STATES, October 6, 2021 /EINPresswire.com/ -- The global [next generation biofuels market](#) size was valued at \$6.0 billion in 2020, and is projected to reach \$59.4 billion by 2030, growing at a CAGR of 26.4% from 2021 to 2030. Biofuels are fuels produced by a biochemical

reaction using biological sources such as raw materials. By production, biofuels can be categorized into first-, second-, and third-generation biofuels. First-generation biofuels, also known as conventional biofuels, are prepared using food crops, such as soy, rapeseed, corn, and similar others. Second-generation or advanced biofuels are produced from non-food crops and waste, such as forest residues, non-edible oils, crops, such as Miscanthus, and others. Third-generation biofuels are derived from algae, which have proven to be the most efficient source for biofuel production. The market is expected to register a double-digit growth rate during the forecast period, attributed to the increased demand from the transportation and the power generation industry.

The global next generation biofuels market has driven by the factors, such as sustainable and clean source of fuel, easy availability of raw materials that are non-food crops & wastes, lesser concentration of greenhouse gases as compared to conventional fuels, and governmental incentives that supports the development of advanced biofuel production technologies.

The next generation biofuels market is segmented into process, biofuel type, raw materials, application, and region. By process, the next generation biofuels market is divided into biochemical process and thermochemical process. The thermochemical process segment

accounted for the [largest share](#) in 2020, while the biochemical process segment is projected to grow at the highest CAGR of 26.7%.

By biofuel type, the market is classified into biodiesels, biogas, biobutanol and others. In 2020, biodiesels fuel type held the largest share of the market. Biodiesels are anticipated to maintain the biggest sales proportion because of the developing use of biofuels because the engine fuel. This is because of utilization of wonderful yield algae raw material and massive capacity of biodiesels to lessen the discount greenhouse gas emission.

By raw material type, the algae segment is expected to witness robust growth. It grows because it contains more oil and can be grown using sea water or sewage. It can produce 300 times more oil than traditional crops, and it takes up to 10 days to harvest because its growth rate is almost 30 times that of other raw materials.

By application, the next generation biofuels market is divided into transportation, power generation and others. The transportation segment accounted for the largest share in 2020, while the power generation segment is projected to grow at the highest CAGR of 26.7%.

Next generation biofuel markets have held a notable share in the North America. U.S. is one of the prominent producers of next generation biofuels in North America. Governments of many countries in the region are taking initiatives to increase next generation biofuels production to ensure energy security and cleaner environment.

For Enquiry @ <https://www.alliedmarketresearch.com/purchase-enquiry/1918>

By region, North America region is expected to witness robust growth. The U.S. has been one of the leading countries in the development and utilization of biofuels on a global level. Bioethanol is one of the majorly produced and utilized biofuel in the country which is majorly made from corn grain and is abundantly available in U.S.

The major companies profiled in next generation biofuels industry include Algenol Biofuels, Chemtex Group, Abengoa S.A., Enerkem, Gevo, GranBio, Joule United, Inc., POET-DSM, Solazyme and Sundrop Fuels Inc. The players in the market have adopted several strategies, such as product launch and business expansion, to sustain the market competition.

Impact of COVID-19 on the global next generation biofuels market

Lockdown imposed due to the outbreak of COVID-19 pandemic resulted in temporary ban on import & export and manufacturing & processing activities across various industries, which decreased the demand for next generation biofuels from these consumers. In addition, halt in building & construction of new electric utility infrastructures, renewable power plants, grid network, and other power plants, owing to unavailability of workers and increase in demand-supply gap is projected to hamper the next generation biofuels market growth during

the pandemic period. This resulted in decline in market growth in the second, third, and fourth quarters of 2020. However, the next generation biofuels market is expected to recover by the first quarter of 2021, as COVID-19 vaccination has begun in various economies across the globe, which is expected to improve the global economy.

About us:

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

We are in professional corporate relations with various companies and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
