

OpKey a Part of the Latest Gartner Report on Testing Services with Proprietary Assets

The report is focused around Testing Service Providers for Packaged Applications

DUBLIN, CALIFORNIA, UNITED STATES, October 6, 2021 /EINPresswire.com/ -- [OpKey](#), the one-and-only Process Mining enabled Continuous Test Automation platform for packaged applications today announced that it has got mention in an important Gartner report "Differentiate Your Testing Services With Proprietary Assets".

According to Gartner, "Enhanced quality, flexibility and time to market are key reasons why end-user organizations look for testing services. Providers can provide value by offering assets such as specific-to-platform test automation accelerators, which can simplify the process for organizations migrating from on-premises to S4/HANA, Oracle Cloud, Salesforce or other platforms. Offering managers for application testing service providers should focus on the demand around testing for packaged applications, especially when combined with AI/ML. AI-based test automation is driven by data, but product vendors have limited access to client data; this is where service providers like OpKey have an advantage".

OpKey provides Test Accelerators with thousands of Prebuilt reusable automation components, pre-configured test Scenarios, and automatic data generation. This allows testing teams to cut down the initial automation setup time significantly.

"Test automation must be configured by creating core test assets that can drive innovation by improving efficiency and increasing speed to market and is proving to be critical in helping drive digital business transformation initiatives. OpKey has been playing a key role in the quality assurance of ERPs with accelerators for testing commercial off-the-shelf (COTS) with an AI-driven approach. We greatly appreciate this recognition from the Gartner community," said Pankaj Goel, CEO, OpKey.
