Rise in the prevalence of diseases such as Polycystic Ovary Syndrome (PCOS), increase in number of first-time pregnancies in women, declining fertility rates across the globe, growth in awareness regarding fertility testing in both developed and developing countries, and launch of technologically advanced products with high accuracy are the major factors that drive the growth of the fertility test market. Moreover, growth in preference for confidentiality and accessibility of test results and rapid outcomes of diagnosis are other factors that attribute to the growth of

the fertility test market. However, unproven accuracy of ovulation monitors in PCOS/PCOD patients and high cost of fertility testing monitors are expected to hinder the growth of the market.
