What is Surfactants?

Surfactants are compounds that lower the surface tension (or interfacial tension) between two liquids, between a gas and a liquid, or between a liquid and a solid.

Surfactants Market Trends

Surfactants are often used in the form of emulsifiers, detergents, wetting agents, dispersants, or foaming agents to lower the surface tension between either two liquids or a solid and a liquid. They find application in several end-use industries, such as petroleum, pharmaceuticals, agrochemicals, and cosmetics. This widespread application in various end-user industries is expected to increase the surfactant market size.

Low raw material prices, along with lower production costs, are expected to increase the adoption of surfactants. Surfactants provide foam and emulsion with stability and viscosity. This feature is expected to be expected to drive the surfactant market size during the forecast

period.
