Arthroscopy is a minimally invasive surgical procedure that helps surgeons examine and treat bone and joint related problems using an arthroscope and other arthroscopy devices (such as visualization systems, arthroscopic implants, power shaver systems, radiofrequency devices, and others). They are essential to diagnose and treat osteoarthritis, rheumatoid arthritis, carpal tunnel syndrome, bone tumor, and others. The market for arthroscopy devices has grown tremendously in the recent years due to increase in number of sport injuries, rapid ageing

population and increase in patient preference for minimally invasive surgeries.
