

Domestic Couriers Industry Sees An Ideal Solution – The E-Locker System

*The Business Research Company's
Domestic Couriers Global Market Report
2021 - COVID-19 Implications And Growth*

LONDON, GREATER LONDON, UK,
October 11, 2021 /EINPresswire.com/ --

The e-locker delivery system is a computerized electronic locker system used for the security of delivering and retrieving or recovering parcels. Each locker station may include a set of individual lockers of various sizes, each with an electronic controlled release

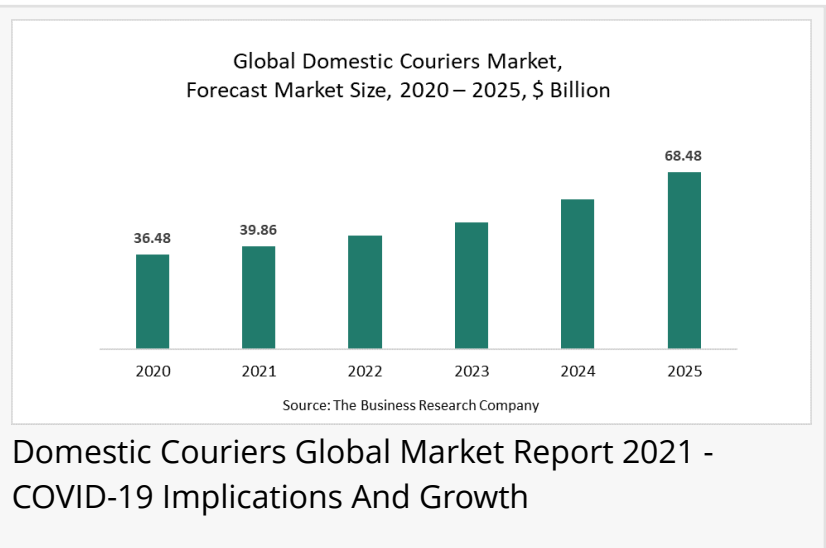

operated door latch. Each locker station has an input/output device that is electronically connected to an internal computer. This makes an ideal solution for apartments, dormitories, businesses, and other applications that handle the ongoing delivery of packages and parcels. For instance, Packcity is an automated electronic locker system that securely stores and distributes inbound parcels, informs recipients that a parcel has arrived and allows 24/7 collections. Packcity enables to store and distribute a large volume of incoming parcels. Its easy-to-use interface allows recipients to track parcels and inform them about the arrival of their parcel. Since the emergence of the E-locker delivery system solves the problems of rising parcel deliveries, it is anticipated to be an important trend that drives the domestic courier market.

TBRC's global domestic couriers market report is segmented by type into ground, express, deferred, by application into business-to-business (B2B), business-to-consumer (B2C), consumer-to-consumer (C2C), by end user into BFSI, wholesale and retail trade, construction, manufacturing, others.
