

# The Implantable Drug Delivery Devices Market Is Effective In Countering The Rise In Target Diseases

*The Business Research Company's Implantable Drug Delivery Devices Global Market Report 2021 - COVID-19 Growth And Change*

LONDON, GREATER LONDON, UK, October 11, 2021 /EINPresswire.com/ --

The rise in the incidence of target diseases such as diabetic retinopathy, cancer, cardiovascular diseases and other chronic diseases is expected to drive the implantable drug delivery devices market. Implantable drug delivery devices are used for site-specific drug administration where the drug is most needed, such as Gliadel® wafer as an implant used in the treatment of brain tumors, Lupron® depot for the treatment of prostate cancer. Hence, the site-specific drug administration nature of implantable drug devices which help in the treatment of target diseases, is driving the implantable drug delivery market.

The global [implantable drug delivery devices market size](#) is expected to grow from \$18.82 billion in 2020 to \$20.14 billion in 2021 at a compound annual growth rate (CAGR) of 7%. The growth is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The market is expected to reach \$29.85 billion in 2025 at a CAGR of 10%.
