Scope of The Report:

AaaS usually means access control as a service. It utilizes software as a service (SaaS) technology, and it is cloud-based. Access control as a service is entirely a cloud-based solution that is coordinated to approve and validate users hence, enlightening the physical safety of the service as well as improving business procedures and end-user experiences throughout a network. This facilitates users to gain entry to distinct facilities and web applications from anywhere. The major aim of access control as a service is to offer protection by permitting or limiting entry to these assets by any party or entity.

Brandessence Market Research

This is generally done as a safety measure to safeguard those funds from illegal access or management. There are three major types of access control as a service such as role-based access control (RBAC), discretionary access control (DAC), and mandatory access control (MAC).
