Aquaculture is the process of breeding, cultivating, and harvesting aquatic organisms. It is a controlled process of farming in water, especially for human consumption. Aquaculture can be done in coastal ocean water, freshwater ponds, rivers, farming land, and tanks. In Saudi Arabia, aquaculture activities have increased due to the high consumption of seafood in the country. Saudi Arabia is also home to a wide range of fish and other marine species with a 2,600 km long coastline strategically located by the Red sea that is suitable for aquaculture development.

The Saudi Arabia aquaculture market is primarily driven by the increasing awareness regarding the nutritional value of seafood. It is a rich source of proteins, fatty acids, vitamins, minerals, and other essential micronutrients. The rising per capita incomes, changing lifestyles, and growing demand for high-quality protein-rich food in the country are propelling the market growth. Moreover, the Government is undertaking several initiatives to increase domestic production

and promote sustainable aquaculture practices that are eco-friendly, socially accepted and technically viable. Furthermore, there have been strong advancements in the aquaculture industry catalyzed by favorable environmental conditions across the country. These factors are expected to positively impact the market growth in the coming years.
