Surrogacy Market by Type (Gestational Surrogacy and Traditional Surrogacy) and Technology (IVF with ICSI, IVF without ICSI, and IUI): Global Opportunity Analysis and Industry Forecast, 2016–2025”

*Allied Market Research*

According to the 2018 National Survey on Drug Use and Health (NSDUH), 14.4 million adults aged 18 and older (5.8% of this age group) had alcohol use disorder. This includes 9.2 million men (7.6% of men in this age group) and 5.3 million women. Furthermore, drinking alcohol can reduce both men’s and women’s fertility. Alcohol consumption in men can cause difficulties with fertility, reduced gonadotropin release, testicular atrophy, and decreased testosterone & sperm production. While in women, research shows that even drinking lightly can increase the time it takes to get pregnant and reduce the chances of having a healthy baby. Moreover, women who

drink large amounts of alcohol are more likely to have heavy or irregular periods, fertility problems, and can also have an effect on ovulation, which can make it difficult to conceive.

Furthermore, the trend of delayed pregnancy has steadily increased globally.
